ALPINE PROJECT

(ARCO Alaska, Anadarko, Union Texas Petroleum)

Baker

Michael Baker Jr., Inc.

- Crossing Engineer
- Program Manager

Houston Contracting Company

- Pipeline Support Contractor

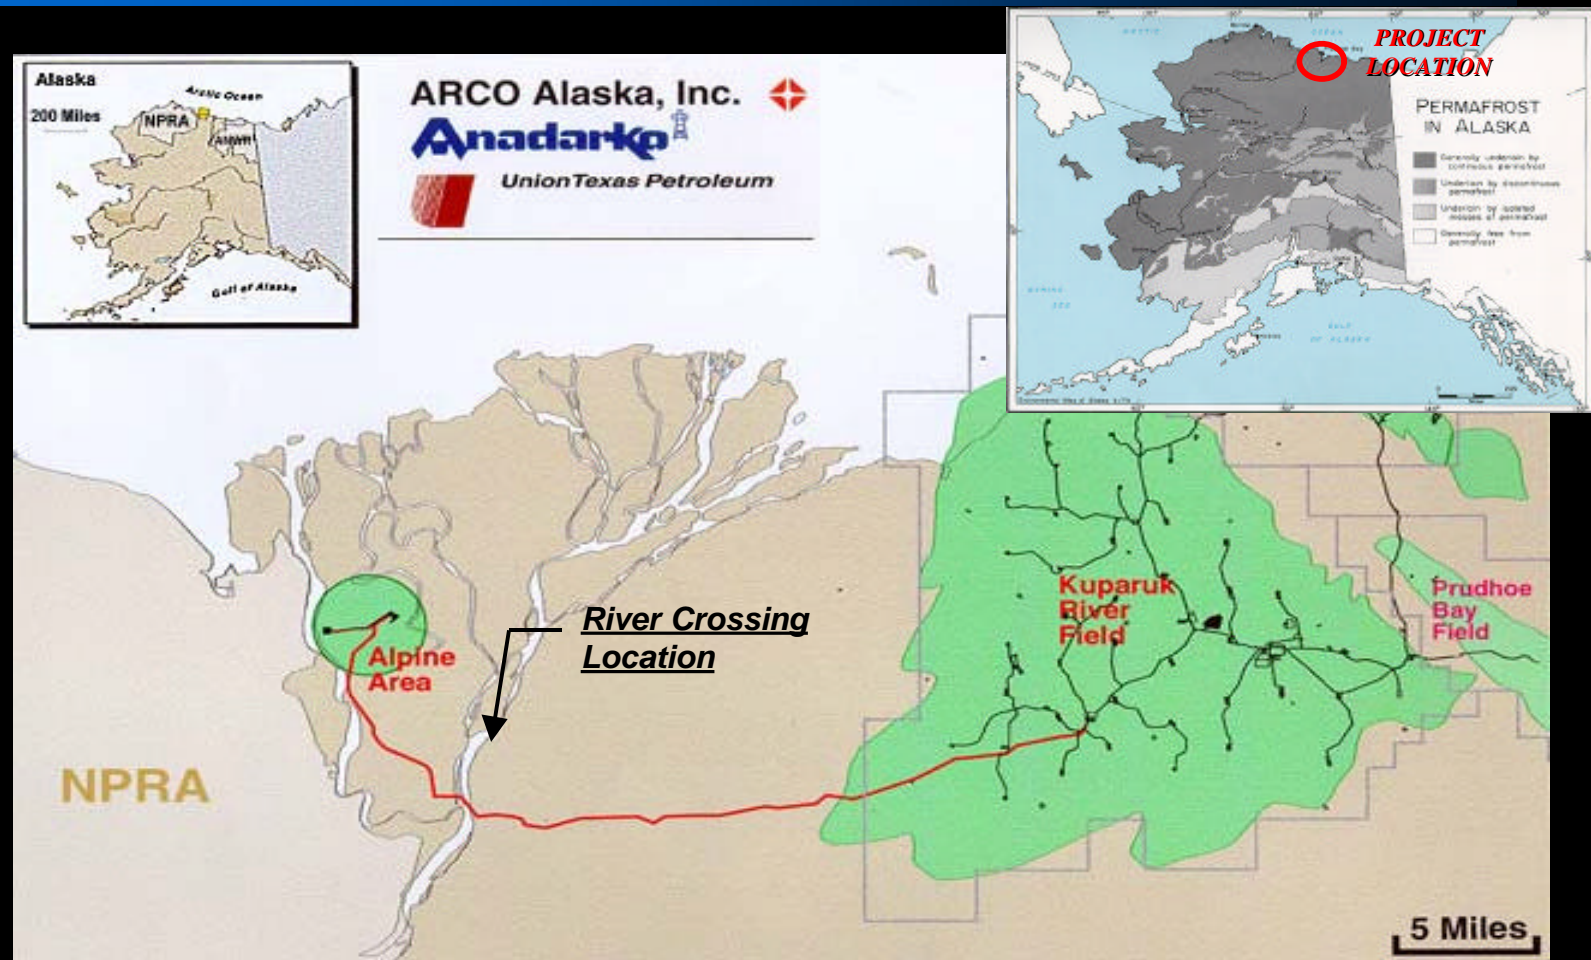

Horizontal Drilling International

- Crossing Installation Contractor

Project Overview

Alpine Development - Location Map

Project Ground Conditions

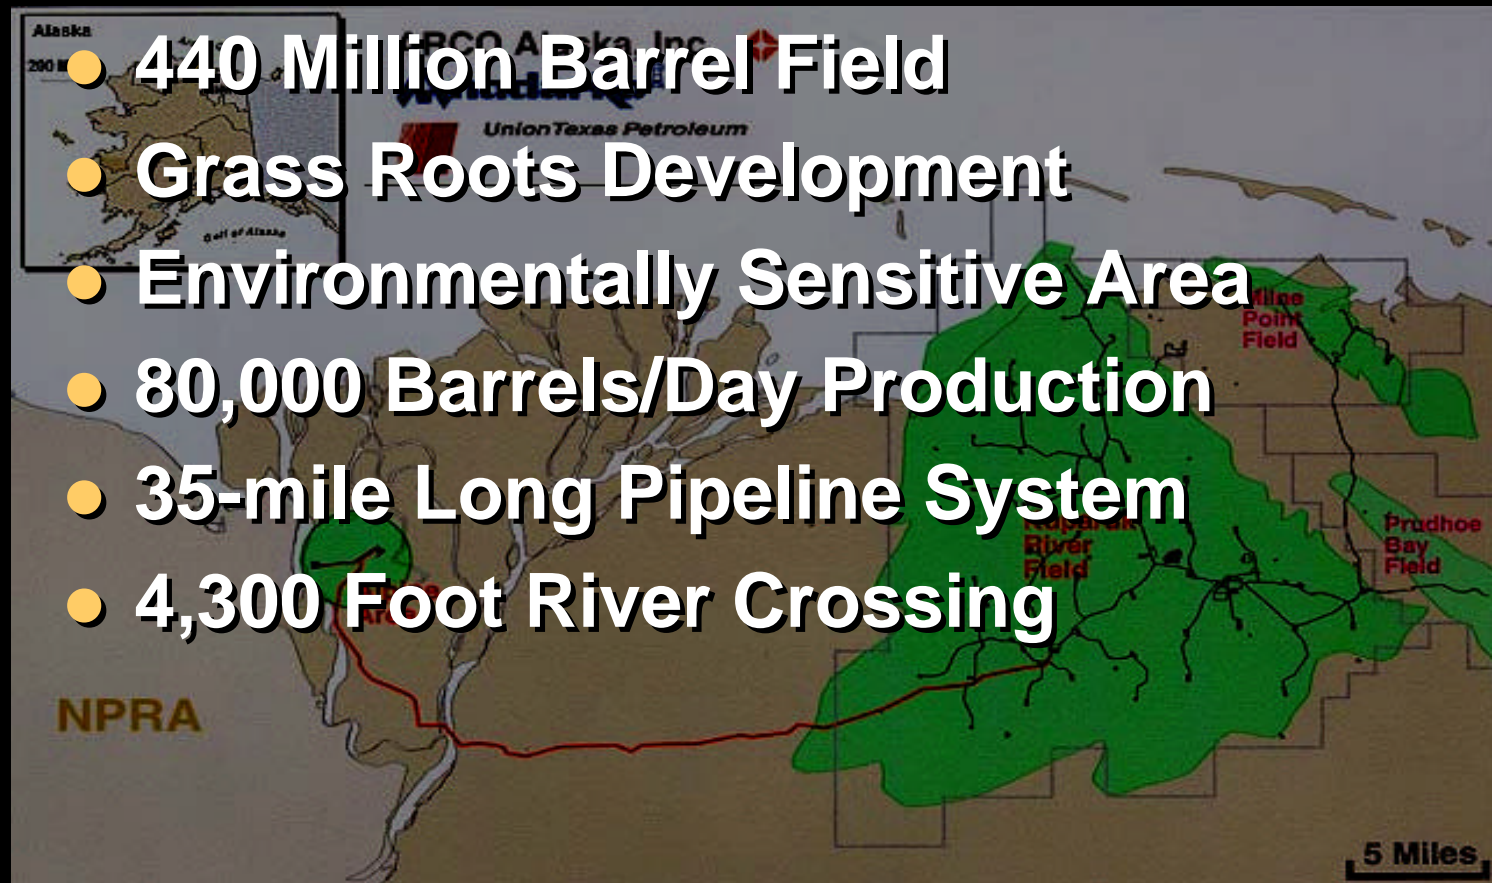

The Wintertime View

Project Overview

Specifics

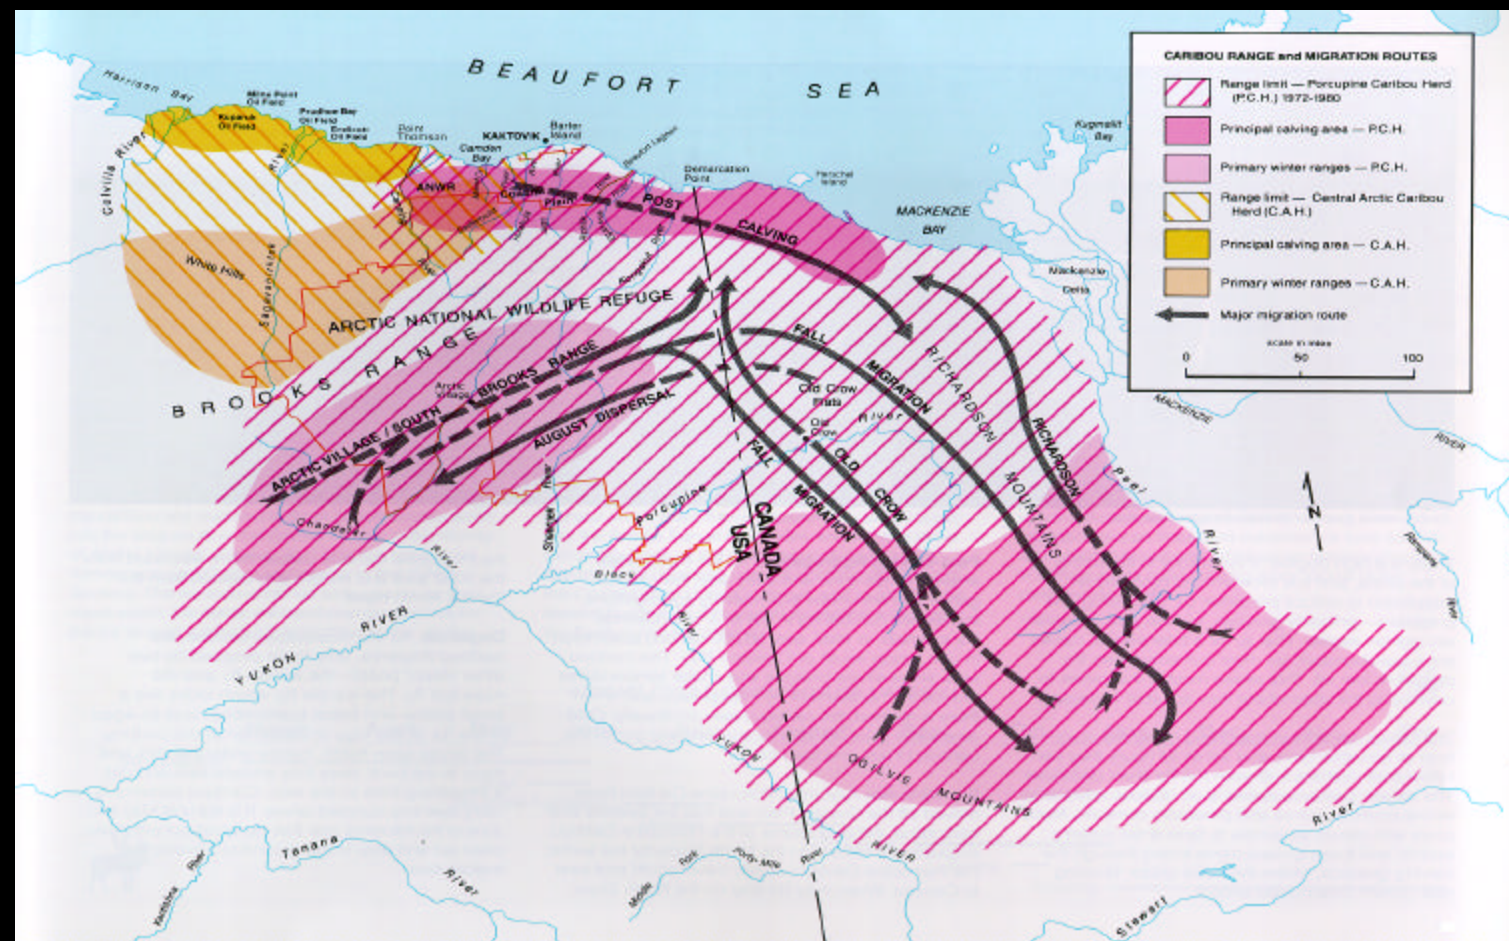

- 440 Million Barrel Field
- Grass Roots Development
- Environmentally Sensitive Area
- 80,000 Barrels/Day Production
- 35-mile Long Pipeline System
- 4,300 Foot River Crossing

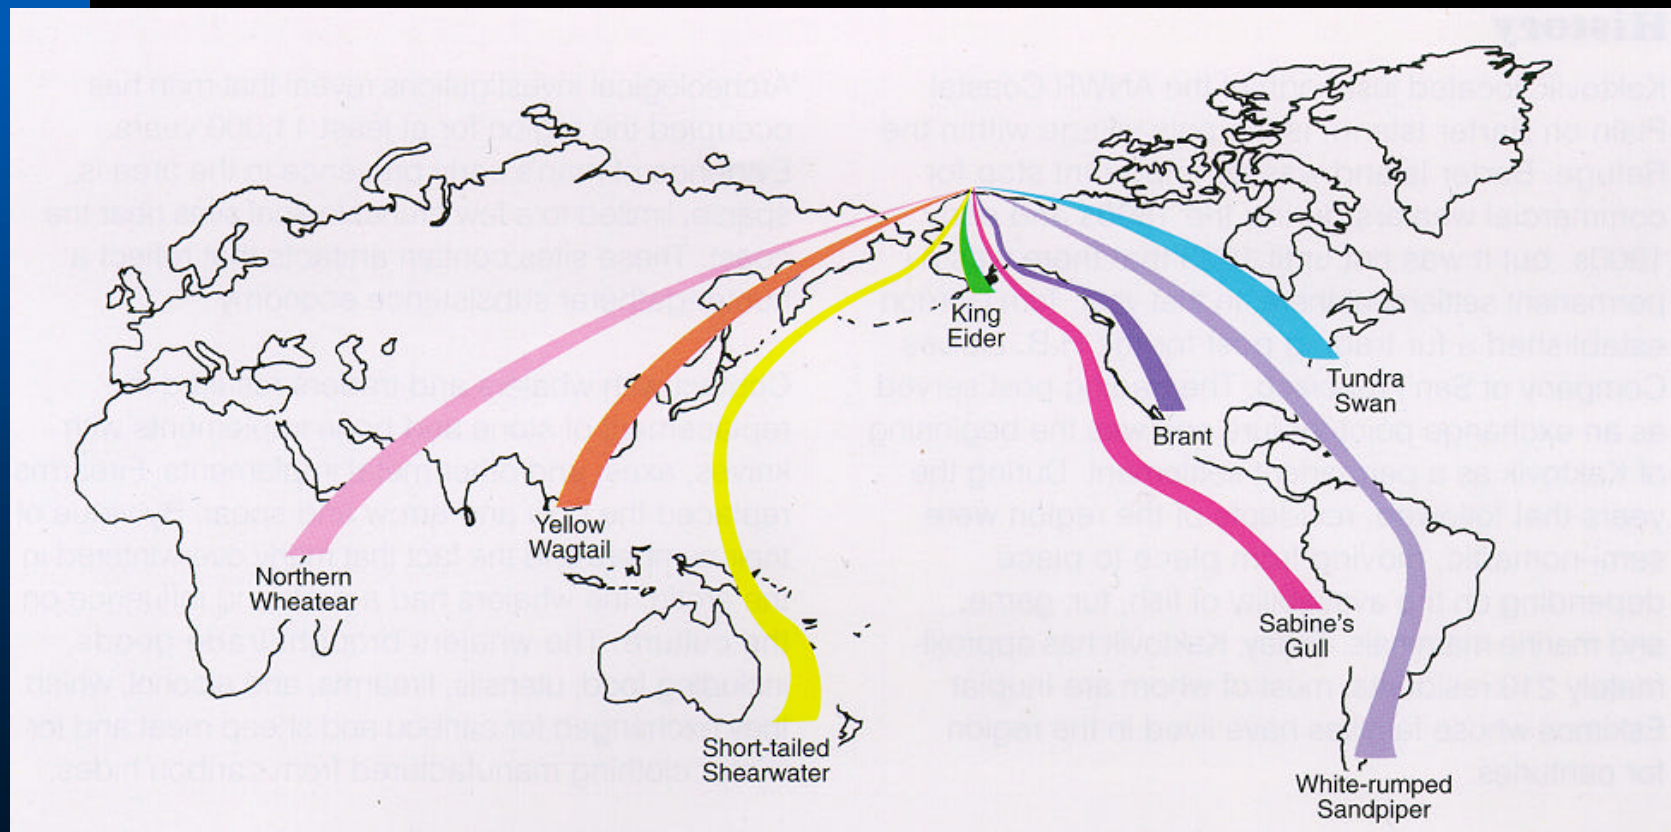

Delta Conditions - '96 Breakup

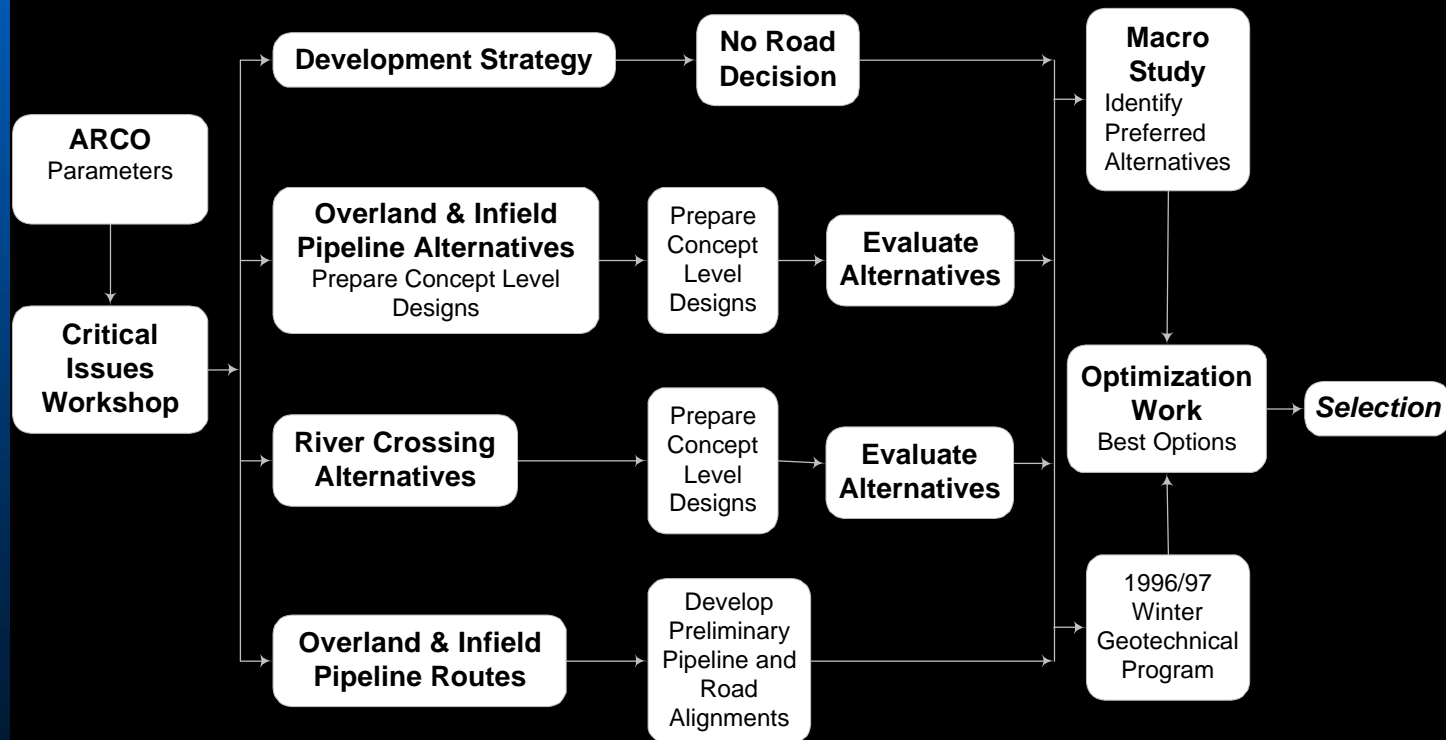

Caribou Migration

Bird Habitat

Crossing Location f (Larger Issues)

Crossing Location Selection

- Cross-Section 14 shorter (4,200 vs 10,000 feet)
- Longer Pipeline Route for 14 (30 vs 34 miles)
- No In-Delta Water Xings w/14
- Soil Strata Less Defined at 10

Crossing Design - East Channel

- **4 Pipeline Crossings: 4,300 Feet Each**
- **14-inch Crude Oil: 20-inch Casing**
- **12-inch Seawater: 18-inch Casing**
- **8-inch Utility Casing: Diesel/Fiber Optics**
- **8-inch Anode: Cathodic Protection**

Crossing Mode Alternatives

– Suspension Bridge

– Trench

– HDD

Suspension Bridge Alternative

- Advantages

- Less Subsurface Impact
- Easy to Monitor/Inspect
- No Corrosion Issues
- Future Lines at Little Cost

- Disadvantages

- Construction Over/In River
- Highest Labor/Equip Impacts
- 2 Construction Seasons
- High Visual Impact
- High Removal Cost

Trenched Alternative

- Advantages

- Buried - Protected w/Low O&M
- Retired In Place
- Not Limited by Length.

- Disadvantages

- Extensive Work In the River
- Impacts to Fish/River Activity
- Requires Cathodic Protection
- Future Lines Expensive
- 2 Seasons Construction

Horizontal Directionally Drilled

– Advantages

- Small Construction Footprint
- Lowest Labor/Equip Impact
- No Work In/Over River
- No Impact - Fish/river Activity
- Shortest Construction Duration
- Buried - Protected W/Low O&M
- Retired in Place
- Length OK W/ HDD Technology

– Disadvantages

- Subsurface Sensitive
- Requires Cathodic protection
- Future Lines Expensive
- No History in the Arctic

River Crossing Design Sequence

- ↓ **Geotech Program**
- ↓ **Thermal Modeling**
- ↓ **Thaw Settlement**
- **Strain Based Design**

- **Pipe Coating**
- **Cathodic Protection**

- **Materials**
 - ◆ **Tensile (yield/ultimate)**
- **Welding**
 - ◆ **Need low f_y/f_u**
 - ◆ **Low Heat Procedure**
 - ◆ **CTOD**
 - ◆ **Mod. Acceptance Criteria**
 - ◆ **Enhanced NDE**

200 year Event @ River Crossing

Horizontal Directional Drilling Crossing Soils & Design Profile

Thermal Modeling

- For hot pipelines buried in permafrost
- Or for cold pipelines buried in thawed frost susceptible soils
- Thaw/frost bulb diameter coupled with thaw settlement or heave predictions from the geotechnical program
- Results used to predict strain in pipeline

Predicted Displacement Profile

Predicted Strain Profile

Top Axial Strains (Compression Negative)

Execution Critical Success Factors

- **Effectively Mobilize, Execute and De-mobilize**
 - Leave Nothing Behind but the Pipeline
- **Correct Adjustment of HDD for Arctic Conditions**
 - Drill Slurry (Mud) Design
 - Cold Weather Outfitting of Equipment and Enclosures
 - Staffing for 24 Hour, Remote Location Effort
- **Successful Insertion of Specialty Contractor Into North Slope Project Environment**
 - Safety
 - Production
 - Schedule
 - Quality

Horizontal Directional Drilling

Horizontal Directional Drilling

Typical HDD Crossings

- **Rivers, Canals, Estuaries**
- **Roads, Freeways**
- **Protected Habitat - Wetlands and Nesting Areas**
- **Shore Approaches**
- **Other Buried Utilities**

Construction Infrastructure and Logistics

Pre-Drilling Equipment

Ice Roads & Pads

- Construct Site Access & Service Roads
- Construct HDD Ice/snow Work Pads
- Construct Ice/Snow ROW Road From HDD Site to Alpine Pad

Shelters, West

(-50 Degrees Fahrenheit,
January 17, 1999)

Entry Pits

Pit Liner

**Plywood
Flooring**

Deadman

Shelter Operations

- All Drilling Operations Indoors
- Shelter Maintained at 40-45°F

Colville River Crossing Construction Camp

- Housed 100 People
- Fully Contained Complex
